

Bush Fire Prone Land and Mapping Factsheet

What is Bush Fire Prone Land?

Bush fire prone land is land that can support a bush fire or land that is likely to be subject to bush fire attack. This includes most vegetated areas and land that falls within the buffer distance of that vegetation.

Bush Fire Prone Land Map

Council is required to prepare a bush fire prone land map in consultation with the NSW Rural Fire Service (RFS) using the RFS document, [Guide for Bush Fire Prone Land Mapping](#). In accordance with legislation, this map is certified by the Commissioner of the RFS and updated every five years to reflect changes in vegetation or legislation.

The current bush fire prone land map for the Camden local government area (LGA) was certified by the RFS Commissioner on 6 January 2021.

The new bush fire prone land map has resulted in some additional properties being designated as bush fire prone land, while some properties are no longer designated as bush fire prone land. These changes are the result of:

- The inclusion of an additional category into bush fire prone land mapping by the RFS. Vegetation Category 3 was added in November 2015 and was created in response to the impacts of grass fires. In the Camden LGA this category is mostly grasslands and affects rural and rural-residential areas,
- Removal of bush fire prone land mapping where development has resulted in clearing of land that has reduced the fire risk, for example, where residential subdivisions have occurred.

Council will be working with the RFS to update the mapping on a regular basis to ensure that changes due to urban development are reflected.

Is My Property Mapped as Bush Fire Prone Land?

There are a few ways to find out if your property is identified as bush fire prone land:

- find your property on the [Bush Fire Prone and Map](#) (PDF);
- use the [RFS Bush Fire Prone Land Mapping Tool](#);
- access the [NSW ePlanning Spatial Viewer](#). You will need to turn on the Bush Fire Prone Land layer under the 'Hazard' heading; or
- apply for a [Section 10.7 Planning Certificate](#) from Council. The planning certificate will include a statement advising that the land, or part of the land, is bush fire prone, or that the land is not bush fire prone.

What do the Colours on the Bush Fire Prone Land Map Mean?

The bush fire prone land map includes four different categories based on vegetation type and potential bush fire risk, which is based on combustibility and the likelihood of forming fully developed fires.

Vegetation Category 1 (Red)	Land considered to be the highest risk for bush fire and surrounded by a 100m buffer. Vegetation Category 1 consists of areas of forest, woodlands, heaths (tall and short), forested wetlands and timber plantations
Vegetation Category 3 (Dark Orange)	Land considered to be a medium bush fire risk. Surrounded by a 30m buffer (buffer is yellow). Vegetation Category 3 consists of grasslands, freshwater wetlands, semi-arid woodlands, alpine complex and arid shrublands
Vegetation Category 2 (Light Orange)	Land considered to be a lower bush fire risk than categories 1 and 3. Surrounded by a 30m buffer. Vegetation Category 2 consists of rainforests and lower risk vegetation parcels, for example due to active management, topography, access and likelihood of fire detection by the community
Vegetation Buffer Zone (Yellow)	Area that is determined to act as a buffer to the relevant vegetation category

What if I Don't Agree with the Bush Fire Prone Land Map?

The bush fire prone land map has been produced from aerial photos. If you disagree with the mapping on your property you can contact Council to request a review. You will need to outline the reasons why you disagree taking into consideration the category of vegetation and the type of vegetation found on your property. Council will review the information in partnership with the RFS using the RFS [Guide for Bush Fire Prone Land Mapping](#) document.

Are There Specific Requirements for Development on Bush Fire Prone Land?

In NSW different construction standards and development restrictions apply to land that has been identified as bush fire prone to manage the increased risk from bush fires.

Bush fire prone land mapping is used as a trigger for development control purposes to ensure that risks from fire are considered. New development, or alterations and additions to an existing development, that requires the submission of a development application must meet the relevant specifications and requirements of the RFS [Planning for Bush Fire Protection 2019](#). This document also requires development to meet the requirements of *Australian Standard AS3959 - Construction of buildings in bushfire-prone areas*.

Not all development on bush fire prone land requires the submission of a development application to Council. Please refer to Council's '[Check](#)' webpage for more information. Information on the submission requirements for complying development certificates and development applications involving bush fire prone land is available on Council's [website](#).

Further information is also available on the [RFS website](#).

What is a Bush Fire Attack Level (BAL)?

A Bushfire Attack Level (BAL) is a means of measuring the severity of a building's potential exposure to ember attack, radiant heat and direct flame contact.

There are 6 levels, in order of lowest to highest risk category:

- BAL-LOW;
- BAL 12.5;
- BAL 19;
- BAL 29;
- BAL 40; and
- BAL FZ (Flame Zone).

The BAL rating is determined by applying the methodology in Appendix 1 of the RFS publication [Planning for Bush Fire Protection 2019](#).

The BAL rating is based on your individual site taking into consideration:

- the region where you live,
- the type of vegetation around your property and the distance to the vegetation, and
- the slope of the ground under the vegetation.

The BAL will also vary depending where on the site the development will be located. You can use the [Single Dwelling Application Kit](#) to assist you in determining the BAL for your home or development.

Where Can I Get Help?

It's important to note that neither Council or the RFS determine BAL ratings. To find a bushfire planning and design accredited practitioner you can search the register maintained by the [Fire Protection Association Australia](#) or visit the [RFS website](#).
